

"K" Motor Advance Notification Policy

To conserve launch day equipment setup and take-down time, the "C" cell [for "K" motors] will not be setup as part of the initial launch day equipment configuration unless advance email notice is provided to the BARC President.

Due to limited resources, I am asking for a "heads-up" notification from HPR certified filers if they think they may want to use a "K" motor at any launch. I realize that several factors may determine whether (or not) a "K" motor is actually used; but, **if you think there is a chance** you may want to use one, **please send me an email before launch day.**

However, if someone decides at the launch that they would like to use a "K" motor, please notify me and we will provide that launch capability - the "C" cell will be setup. It will just take a little time.

Thank you for your understanding and cooperation,

Mike Zapolski, Sr.
BARC President
